Table of Contents for Supplemental Material

Smoking-Associated DNA Methylation Biomarkers and Their Predictive Value for All-Cause and Cardiovascular Mortality

Yan Zhang, Ben Schöttker, Ines Florath, Christian Stock, Katja Butterbach, Bernd Holleczeck,
Ute Mons, and Hermann Brenner

Table S1. Methylation intensity by characteristics of the study population

Table S2. Spearman correlation coefficients between methylation at 9 CpG sites

Table S3. Association between smoking behavior and methylation intensity

Table S4. Methylation intensity and smoking in relation to all-cause mortality

Table S5. Sex-specific association of the methylation score and smoking with all-cause mortality

Table S6. Evaluation of the SCORE and methylation intensity in prediction of fatal
cardiovascular disease (controlling for batch effects)

Table S7. Evaluation of the SCORE and methylation intensity in prediction of fatal
cardiovascular disease (excluding participants with cardiovascular disease at baseline
n=216)

Figure S1. Dose-response relationships between smoking behavior and methylation intensity

Figure S2. Kaplan-Meier estimates of survival by methylation quartiles
